### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John Musone on 6/3/05.

The application has been amended as follows:

#### CLAIMS

- Claim 1, 2<sup>ND</sup> line from the end, after "and to" – a closed circuit cooling channel— has been inserted.
- Claim 1, 2<sup>ND</sup> line from the end, "the" has been replaced by –system of the– has been inserted.
- Claim 18, 2<sup>ND</sup> line from the end, after "and to" – a closed circuit cooling channel— has been inserted.
- Claim 18, 2<sup>ND</sup> line from the end, "the" has been replaced by –system of the – has been inserted.
- Claim 19, 2<sup>ND</sup> line from the end, after "and to" – a closed circuit cooling channel— has been inserted.

- Claim 19, 2<sup>ND</sup> line from the end, “the” has been replaced by –system of the– has been inserted.

### **REASONS FOR ALLOWANCE**

2. The following is an examiner’s statement of reasons for allowance: the prior art of record do not fairly teach the last paragraph, as amended above, of each of the independent claims in permissible combination with the rest of the claim limitations.

While closed circuit cooling burner inserts are known per se, Sakurai et al and Hess having previously been applied, their use in gas turbine combustors has not been established. Particularly, when “the hot-gas-path component and the planar shaped element collectively form a channel which is fluidically connected to a coolant source on a first side and to a closed circuit cooling channel system of the burner insert on a second side.” Note that in the prior art, where a cooling channel between the hot-gas-path component and the planar shaped element is used, such as in Sato or in Zarzalis, the cooling air is also the combustion air and which has already been heated. To further heat the cooling air in the closed circuit cooling channel system of the burner insert would require significant redesign of the air channels to ensure adequate cooling of the hot-gas-path component and the planar shaped element, the closed circuit cooling of the burner insert, as well as maintaining adequate combustion air to be burned with the burner insert.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
